SALESPAL

How the system works

Client onboarding, lead conversion, enquiries, orders, tasks and how performance is measured — as the system behaves today (12 October 2026).

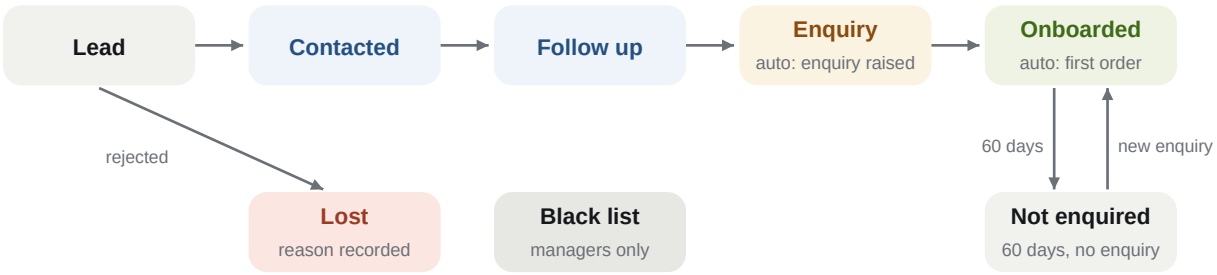
1. Who does what

Role	Main work in SalesPal
Owner	Sees every company, client, enquiry and order. Manages companies (logo, prefix, documents), users, agents and reports.
Manager	Runs a team of salesmen for one or more companies. Adds salesmen, assigns and transfers clients, sets targets, assigns tasks, manages agents and shipping rates, and can put clients on the black list.
Salesman	Works their own clients: contacts leads, raises enquiries, quotes, confirms orders, follows up and records payments on their own orders.
Accountant	For the companies they are assigned: fills job no and invoice dates, records payments, marks orders delivered and completed, maintains shipping rates.

Every figure in the dashboards follows the client's **salesman**: a change a manager makes to a salesman's client still counts for that salesman.

2. The client pipeline

Every client is in exactly one stage. Most moves are made by people; four happen automatically.



Any stage can be moved to Lost; only managers and the owner can add or remove Black list.

Stage	How a client gets here
Lead	Added as a new client (default), or assigned to a salesman by a manager.
Contacted	Salesman records **Contacted** on the lead task (with the contact person's details), or sets it by hand.
Follow up	Salesman records **Follow-up** with a reason and the next date, or sets it by hand.
Enquiry	**Automatic** when an enquiry is raised (or sent to the client) for a Lead, Contacted, Follow up or Lost client.
Onboarded	**Automatic** when the client's first order is created (enquiry confirmed). A Not-enquired client returns here when it raises a new enquiry.

Stage	How a client gets here
Not enquired	**Automatic** after 60 days with no enquiry or order (shown as "Not enquired (2 months)").
Lost	Salesman records **Rejected** on a lead, or sets Lost by hand. The reason is kept in the history.
Black list	Managers and the owner only. A black-listed client cannot get new enquiries or orders.

Past **Lead**, a client needs a contact person, designation and phone (Lost and Black list excepted). If they are missing, the system asks for them before the stage changes.

3. Adding clients, departments and contacts

- **Start with the CR number.** As it is typed the system checks whether the company is already registered and shows who handles it, department by department.
- **New company:** fill in the name, contact person and status; the client is created for the salesman (or the salesman a manager picks) under the chosen company.
- **Existing company:** choose **Add a new department**. The department is its own client — its own salesman, contact, enquiries, orders and stage — while the company's name, CR number and documents are shared.
- A salesman sees only their own clients and departments; managers and the owner see every department of a company.
- **Extra contacts:** on the client page, **Add contact** stores more people (name, designation, phone, email). The main contact stays on the client and is changed with Edit client.
- **Duplicates:** the same phone number or email cannot be used by two clients.

4. Lead assignment and conversion

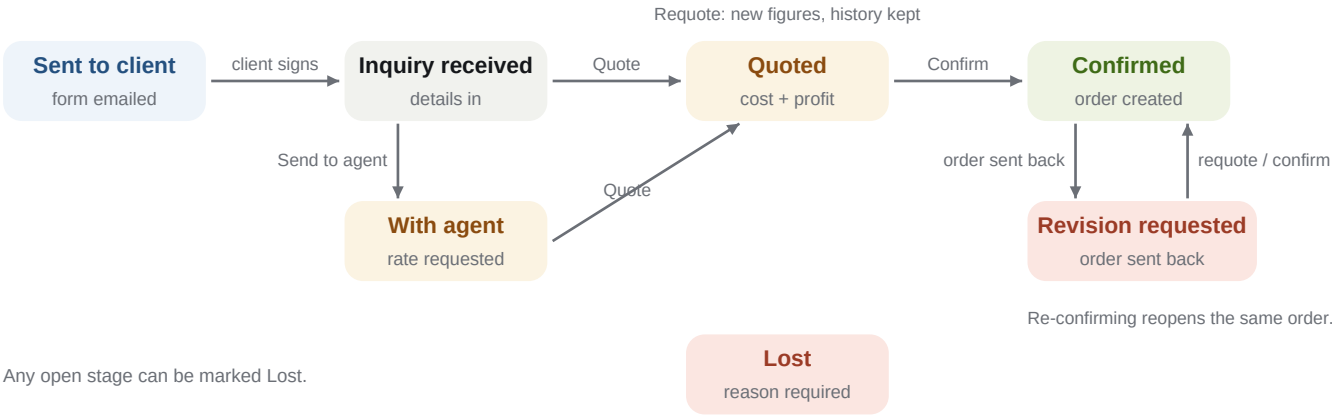
When a manager gives a lead to a salesman — a new client, a reassignment, or a full transfer from another salesman — the salesman gets a **Lead follow-up** task. The task has three outcomes:

Outcome	What the salesman enters	What happens
Contacted	Contact person, designation, phone, email (optional), note	Client details are updated, the client moves to Contacted and the task is completed.
Follow-up	Reason and the next follow-up date	Client moves to Follow up; the task stays open and moves to the new date.
Rejected	Reason	Client moves to Lost and the task closes as unsuccessful.

From there the lead converts by getting an enquiry (stage Enquiry) and then an order (stage Onboarded).

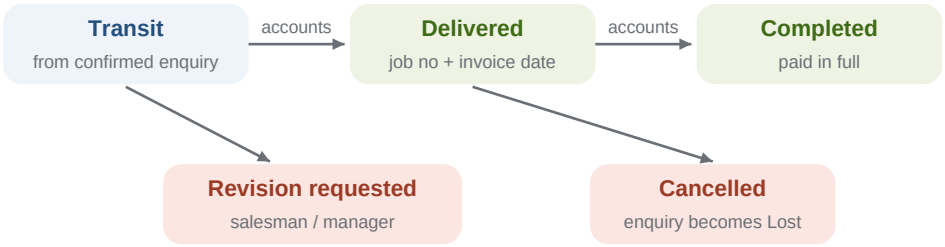
Transferring clients: on the Team page a manager can move all of one salesman's clients to another (for example when someone leaves), or move selected clients from the Clients page. Enquiries and orders already raised stay credited to the salesman who raised them.

5. Enquiries — from request to order



- **New enquiry:** the salesman fills in the shipment (mode, route, equipment, packages, weight, incoterm, handling, payment terms) and can quote straight away or later. Chargeable weight is calculated automatically.
- **Send to client:** the client gets an email link to a form, fills in the shipment and signs. The enquiry waits as *Sent to client*, then becomes *Inquiry received* when they submit. The signature appears on the enquiry and its PDF.
- **Send to agent:** an agent gets the shipment details (without the client's name) and a link to send their cost. The enquiry is *With agent*; replies appear on the enquiry and Quote starts from the cheapest one.
- **Quote / Requote:** cost + profit = the quoted price. A requote keeps the old figures in the history.
- **Confirm:** creates the order (status Transit) and onboards the client.
- **Company:** each enquiry is raised under one of the salesman's companies; it decides the enquiry number prefix, the logo and export office on the PDF, and which accountants see the order.
- **Follow-ups:** an enquiry still open after 30 days gets a follow-up task. **Follow up** logs a comment and moves the task to the next date; the task completes when the enquiry becomes an order (or closes if it is lost).

6. Orders and payments



Step	Who	Rule
Transit	Automatic	Created when the enquiry is confirmed, for the quoted amount.
Delivered	Accounts	Needs the job no and invoice date. Credit orders get a due date (invoice date + credit days).
Completed	Accounts	Only when the order is paid in full.

Step	Who	Rule
Revision requested	Salesman / manager	Order is put on hold, its enquiry becomes *Revision requested* and the salesman gets an **Order revision** task. Requote or confirm reopens the same order (same number, job no and payments).
Cancelled	Manager / accounts	A reason is required; the enquiry becomes Lost.

- **Payments:** an advance at order time plus any number of payments (date, method, reference). The balance due and past-due orders are tracked on the orders list and the accountant dashboard.
- Accountants record payments for their companies; a salesman can record payments on orders from their own enquiries.

7. Tasks and follow-ups

Task type	Created by	How it ends
General	Anyone	Status set by hand.
Client follow-up	Salesman or manager, for a chosen client and date	Follow up moves the date; closed by hand.
Lead follow-up	Automatic when a lead is assigned	Contacted / Follow-up / Rejected (section 4).
Enquiry follow-up	Automatic after 30 days open	Follow up moves the date; completes when the order is created.
Order follow-up	Salesman or manager	Follow up moves the date; closed by hand.
Order revision	Automatic when an order is sent back	Completes on requote or re-confirm.
Payment follow-up	Accounts / salesman	Closed by hand.

8. How performance is measured

Every stage change is recorded as an event — the old and new stage, the client's salesman at the time, who made the change, the company and what caused it (by hand, lead outcome, enquiry, order, automatic). All pipeline figures are counted from these events, so the same question gives the same number on every dashboard.

Figure	What it means
Clients in a stage (big number)	How many clients are in that stage right now.
+N this month	Net change this month: clients that moved into the stage minus those that moved out.
Moved in · same days last month	Clients that entered the stage this month so far, compared with the same number of days of last month — so early in the month the comparison is fair.
Here over 14 days	Leads and follow-ups that have not moved for more than 14 days — the ones needing attention.
Conversion (90 days)	Of the clients added in the last 90 days, the share that has been onboarded, and the median days it took.
Order value / target	Value of orders created this month (excluding cancelled and sent-back orders) against the salesman's active target.

Figure	What it means
Payments due	Unpaid balance on orders in transit or delivered, and how many are past their due date.

Comparisons use a percentage only when the earlier figure is at least 5; below that they show the plain difference (for example +3), so small numbers do not produce misleading swings.

9. Companies

- Each company has its own name, enquiry number prefix (e.g. SPA-ENQ-00012), export office number, logo and documents.
- Managers run one or more companies; salesmen work for the companies their manager gives them; accountants see the orders of the companies they are assigned to.
- Clients belong to one company; an enquiry (and its order) can be raised under any company the salesman works for.
